*Mirka's world-class products are manufactured in ultramodern production facilities by a professional workforce.*

*Over the past twenty years, Mirka has grown into one of the world's largest producers of coated abrasives for the Automotive Refinishing Trade.*

*At the same time it has seen a dramatic rise in the sale of abrasives for the industrial surface finishing of wood, metal and composite components.*

*Today we have a wide product range for individual operations and complete sanding systems for specialized applications. In addition to this, our product range includes various sanding accessories.*

*Our company philosophy can be described as striving for continuous improvements, systematic investments in quality, cost awareness, careful planning, the ability to take action and openness to unique solutions.*

*Our operations are certified to the ISO 9001 Quality System and the ISO 14001 Environmental Management System. Mirka is also one of the first companies in Finland to have the Occupational Health and Safety Management System certificate, OHSAS 18001.*

# 02 series

- Carat Flex is a stearate coated abrasive product for dry sanding applications.
- Silicon carbide grain provides a sharp cut with a uniform scratch pattern.
- Carat Flex has been developed especially for hand sanding of wood, sealers, paint and lacquers.
- The backing is a flexible, latex impregnated paper which is ideal for profile sanding.
- Grain adherence is extremely good due to resin bonding.
- A special stearate coating is used to maximize resistance to clogging and loading.

- For dry sanding applications.
- The improved stearate coating minimizes clogging and loading.
- Resin over glue bonding combines aluminum oxide abrasive and durable B and D weight backings.
- Stronger than competitive products using A weight backing.
- Available in "linkrol" - with perforations between discs for ease of tearing.
- The best all-around value priced performance product.

# MIRKA | NONWOVEN ABRASIVES

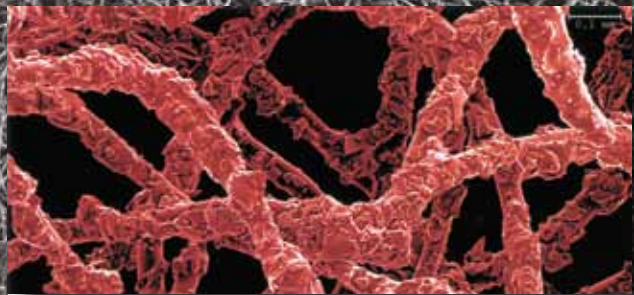

## 18 series

- Mirlon nonwoven abrasives are three-dimensional media made with cut fiber strands, coated with resin and abrasive.
- For applications in fine finishing and surface preparation.
- For use in both the automotive and industrial workplace.
- A very flexible product ideal for use on contoured surfaces.
- Mirlon Total™ is extremely aggressive, although it is thinner, more open and flexible than the standard Mirlon product.

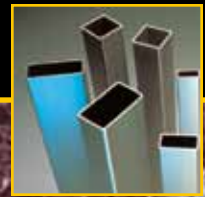

*Competitive products (magnified in the above photo) show significant clumping of resin and abrasive particles - resulting in uneven scratch patterns.*

*Mirlon non-woven abrasive products exhibit superior, consistent abrasive coating. This results in a consistent scratch pattern and more uniform finish.*

- Helps provide an enhanced surface without revealing any scratch.
- The tight grain distribution provides a more consistent scratch pattern without sacrificing load resistance.
- Silver (2A) is a non-steared product designed for applications where loading is not a problem.
- Q-Silver (2B) is a steared product available for applications where loading is a factor.
- Q-Silver Micro (2C) uses 600 to 1500 grade silicon carbide grain and incorporates a zinc stearate coating to prevent loading.

- Gold is designed for finishing and heavy stock removal.
- The durable aluminum oxide grain delivers a fast, exceptionally long lasting cut.
- Proprietary backing is stronger than other competitive brands using traditional backing.
- High strength resin bonding for superior grain support.
- A special stearate coating is used to maximize resistance to clogging and loading.
- A uniform, semi open coat design produces an even, consistent scratch pattern.

# MIRKA ROYAL COARSE CUT

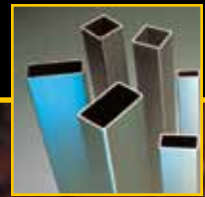

40  
series

- Progressive Bond™ Technology provides special grain bonding for extreme edge wear resistance.
- Semi open coat produces a consistent scratch pattern that can be easily removed - while resisting loading.
- Aggressive abrasive in coarse grades cuts quickly, and is long lasting.
- Flexible for use on contoured surfaces.
- Specially reinforced paper exclusive to Mirka provides superior grain support.

- Discs available in PSA only.
- Discs can be saved by removing them from the backup pad and folding PSA to PSA. To re-use, simply unfold and reapply the disc.

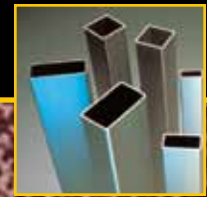

**Hiolit J:**

- For sanding operations requiring both flexibility, tear resistance and durability.

- Offers fast cut and long life in general grinding and light contour sanding applications.

**Hiolit X:**

- Designed for aggressive cutting and heavy duty stock removal.
- This disc should be used for applications where F-weight paper discs fail.

### Red Fiber Discs: (Aluminum Oxide)

- For general grinding applications.
- Open coat design resists loading.

### Gold Fiber Discs: (Alumina Zirconia)

- Fast cutting and durable.
- Open coat design resists loading in the toughest grinding applications.

### Blue Fiber Discs: (Alumina Zirconia)

- Our longest lasting fiber disc.

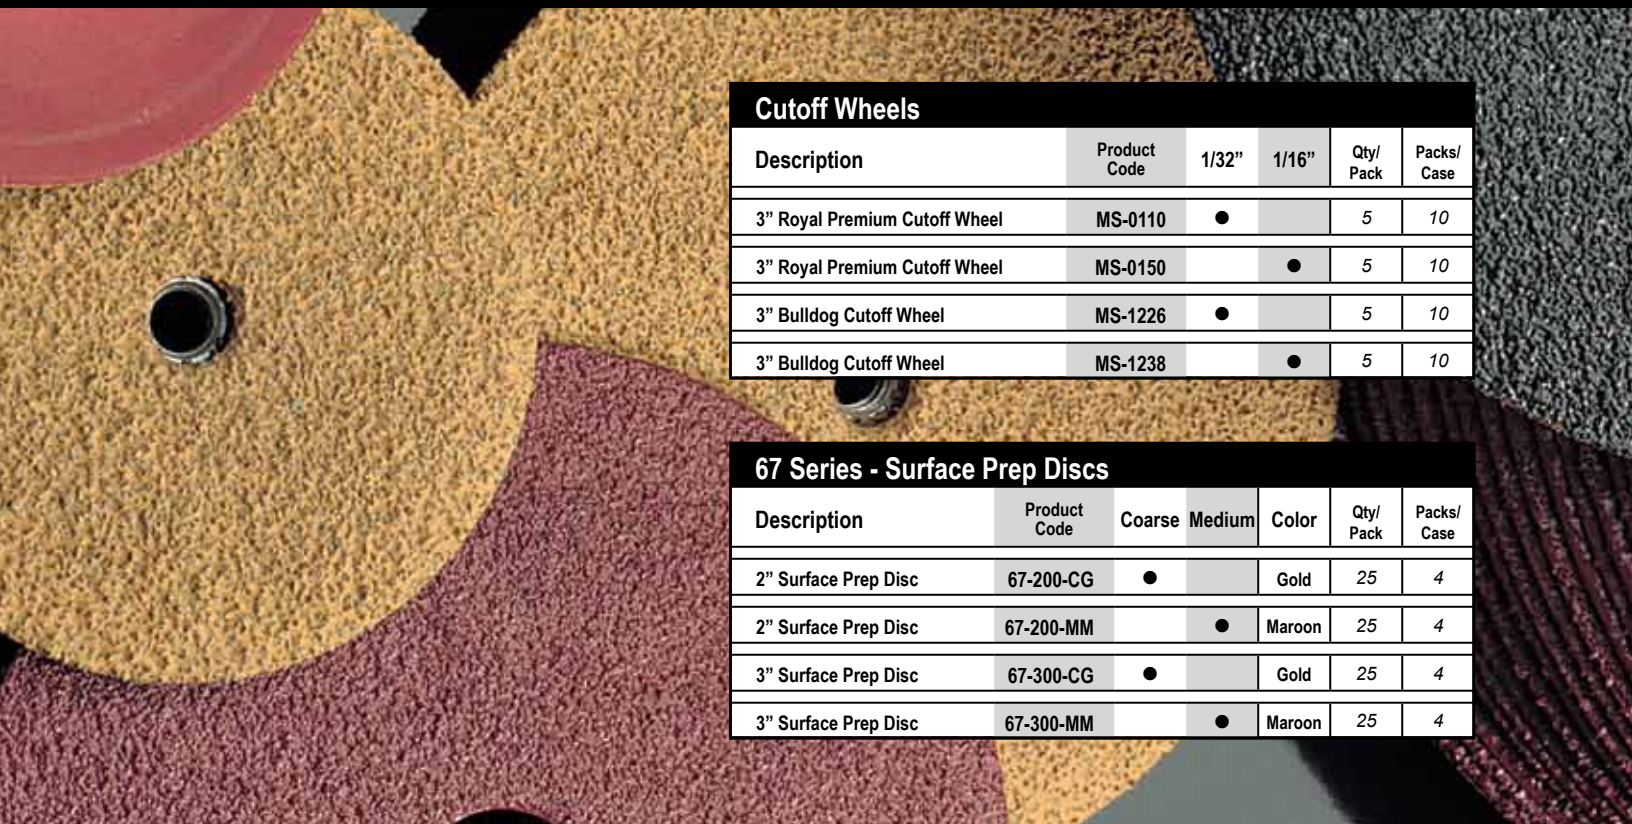

- Special zirconia formulation out-performs standard red fiber discs 3-1 for high production stock removal.

### Trim-Kut®: (Alumina Zirconia)

- Backing resists breaking and cracking.
- Color coded for easy grit identification.
- Quick change mandrels and adapters.
- Can be trimmed down to the 1" core.

**8A**  
series

- Constructed with a fabric face, foam center, and a grip backing.
- Openings in the fabric allow water, solvent and air to flow freely around the abrasive.
- Foam center also provides for even surface pressure that helps eliminate "finger marks" when hand sanding.
- Works especially well when sanding contoured surfaces, corners and sharp edges.
- Combines benefits of abrasive cloth and non-woven products.
- Open cell design holds large amounts of water or solvent for lubrication and cooling.

Abranet® is a revolutionary product for vacuum-assisted sanding operations. The new, patented disc will fundamentally change your work environment.

The main benefits are:

- Dust-free sanding.
- Greater efficiency.
- Better sanding.

- Elimination of pilling problems.
- Improved finish of topcoat.
- Less use of materials.
- Better work environment.
- Improved operator safety.
- Less environmental impact.

Developed to satisfy the unique demands of the automotive refinishing industry, Autonet is the fast, efficient and cost effective abrasive technology that revolutionizes the sanding process.

**Aggressive** Autonet's high cut rate reduces labor time; vac or non-vac.

**Dust-free** Dust extraction through the net yields 20-40% greater

efficiency than paper discs with holes or perforations.

**Cleaner and healthier work environment** Autonet helps remove sanding dust and minimizes contaminants in the workplace.

**Eliminates clogging and pilling** Less defects, less rework, greater shop efficiency translates to greater profitability.

Designed to efficiently tackle the latest surface prep and repair applications, Polarstar uses a polyester film backing material to create a more flexible and much smoother abrasive surface. As a result, Polarstar produces a finer, more consistent surface finish more quickly and, because it also has excellent resistance to clogging, it lasts longer, too.

- Outstanding performance on demanding applications such as tooling gelcoats and scratch resistant automotive clearcoats.
- Designed for optimum performance on both wet and dry sanding.
- Excellent durability – retains its high performance sanding properties for far longer, especially on harder applications.

# MIRKA | FINISHING SANDERS

- Mirka's finishing sanders are constructed of precision molded composites for strength and durability, while reducing operator fatigue. This construction also reduces sound for increased comfort.
- True 12,000 rpm performance - for maximum productivity.
- Each model is counter-balanced for its specific size backup pad.
- Features moisture-resistant composite rotors, and premium counterweight bearings for long life and superior reliability.
- Finishing Sanders can be converted to vacuum operation with the addition of a conversion kit.
